

Thickening Breast Milk & Formula

Recipes Made for Use with the IDDSI Framework*

Wash hands and sanitize bottle before preparation.

Warm milk to at least body temperature ~100°F/38°C.

Find the recipe below, and sprinkle Gelmix into warm liquid (fl. oz.).

Cap and shake well 30 seconds, until completely dissolved.

Let thicken for **Wait Time** listed in recipe. Mix again before feeding.

Each table value represents the number of fluid ounces of liquid to use with one 2.4 g (one stick or two scoops) of Gelmix.

Liquid/Formula Name	Level 1 - Slightly Thick (fl. oz. milk per 2.4 g Gelmix)	Level 2 - Mildly Thick (fl. oz. milk per 2.4 g Gelmix)	Level 3 - Moderately Thick** (fl. oz. milk per 2.4 g Gelmix)	Wait Time (mins)

*Testing performed by Parapharma Tech. Recipes are designed for use with the IDDSI Framework and are intended as a starting point. Use the IDDSI Flow Test when first implementing a recipe in your environment and whenever preparation conditions change to verify the target thickness. For more information about the IDDSI Flow Test, visit iddsi.org. **Level 3 / Moderately Thick liquids should only be used under medical supervision and are not typically recommended for infants unless directed by a qualified healthcare professional. **RTF = Ready-to-Feed; some manufacturers label these products "Ready to Use." Refer directly to product packaging for nutritional data and safety information. For more recipes/printable sheets visit: gelmix.com/recipes - Email: contact@gelmix.com - Phone: 866.950.7278
